AVAILABILITY
Remote contract / full-time

CORE SKILLS

Backend & APIs
Python, Java, PHP, Node.js, Rust, REST APIs, GraphQL, Webhooks

Front end
TypeScript React, Vue.js, HTML, CSS, Bootstrap

Backend & APIs
REST APIs, GraphQL, custom API design, integrations, automation

Data
PostgreSQL, MySQL, scraping, data aggregation, reporting

Infra & Tools
Linux server admin, Docker, Bash, Git, CI/CD basics

Mobile & Security
Ionic, Cordova, Android Studio, Xcode, security auditing, pentesting

CERTIFICATIONS

- CIW JavaScript Specialist
- CIW Web Foundations Associate

STEFAN VUJIC

SENIOR PRODUCT ENGINEER / TECHNICAL CONSULTANT

Product Engineering • Complex Business Systems • AI • Integrations • Automation

Senior Product Engineer / Technical Consultant with 12 years of experience joining complex software projects, understanding existing systems quickly, and delivering useful improvements without a long ramp-up period.

Strongest in messy, moving environments: unclear requirements, production systems, business logic, APIs, data flows, automation, integrations, and internal tools. **Proficient in turning vague business problems into practical technical solutions.**

Available for remote contract, part-time, or full-time work across product engineering, AI, automation, integrations, and complex business systems.

EXPERIENCE

2024 - Present

Independent Product Engineer

Independent

- Designed and built software as a founder, co-founder, and independent product engineer across fintech, AI, internal platforms, automation, ERP software and developer tooling.
- Took products from early technical decisions through architecture, backend/frontend development, integrations, databases, deployment, and continued iteration.
- Turned ambiguous business requirements and operational problems into clear, practical software solutions.

2017 - 2024

Senior Full-Stack Engineer

Paramount Web Technology | Remote / UK

- Built and maintained production software across e-commerce, e-learning, enterprise systems, mobile applications, and custom web platforms.
- Worked across backend and frontend development, database design, APIs, integrations, reporting, performance, and production support..
- Lead developer of Gibbys Electronic Supermarket, WordPress/WooCommerce platform, including custom plugins, commercial features, backend logic, and ongoing production work.
- Built and maintained a B2B e-learning platform for enterprise clients such as UEFA
- Worked directly with clients to define scope, revisions, delivery requirements, and technical implementation details

2015 - 2016

Backend Developer

Kosmo Group | Serbia

- Worked on backend heavy business systems with complex data models, business logic, and reporting workflows.
- Worked on authentication, permissions, server-side functionality, and security related features.

PROJECT FOCUS

- Fintech systems
- AI workflows
- Construction operations software
- E-commerce platforms
- B2B E-learning systems
- Automation & scraping

WORKING STYLE

- End-to-end delivery
- Comfortable with ambiguity
- Strong debugging mindset
- Direct client communication
- Remote collaboration

SELECTED PROJECTS

Baksis

DIGITAL TIPPING / FINTECH PLATFORM

Founder / Lead Engineer

- Designed and built a peer-to-peer fintech/payment platform from the ground up using a custom Python backend, React frontend, and MySQL. Built the internal API layer, transaction workflows, financial business rules, and integration logic without relying on a backend framework.
- Integrated payment gateway, payout provider, and banking APIs under difficult real-world conditions with outdated documentation and unreliable vendor endpoints. Also led business-side coordination with payment, banking, and stakeholders.

LexMind

AI LEGAL ASSISTANT

Co-founder / Product Engineer

- Building an AI-powered legal research and document analysis platform focused on legal workflows, document ingestion, and assisted review
- Designed LLM workflows, semantic search concepts, document-processing flows, full-stack product architecture and custom scraper for public legal cases
- Includes Web app, IOS + Android native mobile apps and a Microsoft Word add in

Gradjevinar

CONSTRUCTION ERP SYSTEM

Product Engineer

- Helped build a specialized CRM for construction companies, covering projects, resources, vehicles, materials, costs, deadlines, reporting and much more.
- Designed practical database-driven workflows for real-world construction administration and internal business control

Gibbys Electronic Supermarket

E-COMMERCE PLATFORM

Full-Stack Engineer / Lead Engineer

- Served as the lead developer for a WordPress/WooCommerce platform of a major Canadian electronics retailer.
- Owned major feature development across backend and frontend, including custom WordPress plugins, WooCommerce logic and extension, commercial functionality, and internal tools.
- Worked on performance, reliability, production issues, and ongoing changes on a live e-commerce system handling real customers, orders, and revenue on a huge scale.

Bitesize Learning

B2B E-LEARNING PLATFORM

Full-Stack Engineer / Lead Engineer

- Built most of a Moodle based B2B e-learning platform used for enterprise training and client specific learning workflows.
- Worked on requirements and ongoing platform development for enterprise clients, such as UEFA.
- Developed custom functionality around organizations, users, courses, permissions, completion tracking, reporting, and administration.

Additional technical work

Data aggregators, scraping tools, automation bots, security auditing tools, mobile applications.
